## Need Training in Rescue?

**(This training should only be done once you have completed the 1 day Work safely at heights course)**

Legislation requires that personnel working under fall arrest conditions have an emergency plan and a means of rescuing a fallen, suspended worker. It is critical that the casualty be rescued as soon as possible; therefore the use of emergency services for rescue should generally be the last option.

It is not always possible to use mechanical devices such as elevating work platforms, etc for rescue operations. Access Unlimited's **Fallen Worker Rescue** course is designed for all personnel required to wear fall arrest/confined space harnesses. The training is based upon the use of simple and rapid pre-rigged rescue kits that do not require the rescuer to go over an edge in order to access the casualty. This half day practical course is delivered by experienced height safety and rescue specialists. We can deliver on-site (subject to appropriate training facilities being available) or at our first class training facility located in Osborne Park, Western Australia.

### Topics Covered

Emergency Plan, Suspension Trauma, Self Rescue, Pre-Rigged Rescue Systems, Simulated Rescue of a Suspended Casualty, Casualty Management and Stabilisation.

### Course Logistics

Number of Participants: Minimum 6 - Maximum 10

Where: Australia Wide

Duration: Half Day (up to 4 hours)

Equipment: Can be supplied by Access Unlimited

Successful completion of the practical exercises will lead to the issue of a Certificate of Training.

We recommend that formal training in Working Safely at Heights is completed prior to commencing this course.
